

Phase 2: Thesis Drafting & Design Conceptualization

(Weeks 7–10)

Objectives

- Draft core thesis chapters based on research findings.
- Conceptualize high-level system design informed by literature.
- Evaluate methodology options and plan for potential redesigns.

Research & Design Tasks

- **Weeks 7–8:** Methodology Conceptualization
 - Define research methodology (iterative prototyping, evaluation metrics).
 - Outline high-level system architecture and design patterns.
 - Plan evaluation framework and KPIs.
 - Identify any need for rethinking technology stack based on Phase 1 findings.
- **Weeks 9–10:** Design Exploration
 - Create conceptual diagrams for key flows (e.g., subscription, pay-per-view).
 - Design evaluation scenarios and data collection strategy.
 - Explore cross-chain integration concepts (XCM, bridges) theoretically.

Writing Tasks (Target: 4,000 words)

- Methodology chapter (2,000 words).
- System Design and Architecture section (conceptual draft, 1,500 words).
- Evaluation plan documentation (500 words).

Deliverables

- Methodology chapter (draft).
- Conceptual system design document with diagrams.

- Evaluation framework outline.
- Updated research questions if refinements are needed.
